

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

- 1-5. (Canceled)
6. (Currently Amended) A watching system comprising:
 - a mobile terminal capable of a first wireless communication on a public call and a second wireless communication on an internal call;
 - a watching camera that takes pictures of a field to output image data; and
 - a remote communication equipment capable of transmitting the image data in a signal to the mobile terminal through one of the first and second wireless communications, wherein the mobile terminal is adapted to put a higher priority on the signal from the remote communication equipment than any other call that is a public call except calls from the watching system.
7. (Previously Presented) The watching system according to claim 6, further comprising a controller that makes a first try with the second wireless communication and a second try with the first wireless communication if the first try results in failure.
8. (Original) The watching system according to claim 7, wherein the controller is located in the mobile terminal.
9. (Original) The watching system according to claim 7, wherein the controller is located in the remote communication equipment.
10. (Original) The watching system according to claim 6, wherein the second wireless communication is on a wireless local area network.
11. (Original) The watching system according to claim 6, wherein the mobile terminal is capable of transmitting a command to the remote communication equipment through one of the first and second wireless communications.

12. (Currently Amended) A watching system comprising:
- a mobile terminal capable of a first wireless communication on a public call and a second wireless communication on an internal call;
- a watching camera that takes pictures of a field to output image data; and
- a remote communication equipment capable of responding to the watching camera to transmit a signal to the mobile terminal through one of the first and second wireless communications,
- wherein the mobile terminal is adapted to put a higher priority on the signal from the remote communication equipment than any other call that is a public call except calls from the watching system.
13. (Previously Presented) The watching system according to claim 12, further comprising a controller that makes a first try with the second wireless communication and a second try with the first wireless communication if the first try results in failure.
14. (Original) The watching system according to claim 12, wherein the second wireless communication is on a wireless local area network.
15. (Cancelled)
16. (Original) The watching system according to claim 12, wherein the remote communication equipment is adapted to transmit the image data of the watching camera.
17. (Original) The watching system according to claim 12, wherein the mobile terminal has a monitor device which displays the signal from the remote communication equipment.
18. (Original) The watching system according to claim 17, wherein the signal from the remote communication equipment is the image data of the watching camera.

19. (Original) The watching system according to claim 12, wherein the remote communication equipment includes a detector that detects a predetermined condition on the image data to generate the signal to be transmitted to the mobile terminal.

20. (Original) The watching system according to claim 12, wherein the mobile terminal is capable of transmitting a command to the remote communication equipment through one of the first and second wireless communications.

21. (Original) The watching system according to claim 12, wherein the mobile terminal is a mobile phone.

22-35. (Canceled)
